ABOUT

Recent Computer Science graduate with experience developing full-stack applications, integrating AI services, and working within startup environments. Passionate about turning ideas into practical software, collaborating closely with stakeholders, and rapidly learning new technologies. Experienced across backend development, frontend implementation, REST APIs, and AI-powered applications, with a strong interest in building products from prototype through to production.

WORK EXPERIENCE

Trackday, Melbourne — Front-End developer Intern (Part-Time)

January 2025 - June 2025

Trackday is a startup social platform for motorsport enthusiasts.

- Collaborated with a team to develop and improve a production web application.
- Built frontend components using HTML, CSS, and JavaScript while assisting with backend integration.
- Worked within an existing codebase to debug software issues, implement new functionality, and improve application reliability.
- Participated in testing, feature validation, and iterative product improvements based on team feedback.
- Worked closely with developers throughout an Agile development cycle using Git for version control.

EDUCATION

University of Melbourne, Parkville — Bachelor of Science

March 2023 - November 2025

PROJECTS

NutriAI — AI-powered Fitness & Nutrition app (Nodejs & Python)

University capstone project developing an AI-powered health and nutrition application.

SKILLS

Programming Languages

- Python (FastAPI)
- JavaScript (Node.js)
- C#
- Java
- C
- SQL
- HTML & CSS

Software Development

- AI Integration
- Agile Development
- Node.js
- REST APIs
- Git Version Control
- Git Collaboration
- Software Testing & Debugging

Professional Skills

- Teamwork
- Communication
- Problem Solving
- Adaptability
- Fast Learner
- Stakeholder Collaboration

- Designed and implemented backend REST APIs using Node.js.
- Integrated OpenAI's API to provide AI-powered food image analysis, personalised nutrition recommendations, and health insights.
- Collaborated directly with stakeholders to translate user requirements into technical solutions.
- Assisted in designing scalable backend architecture with a focus on maintainability and performance.
- Worked across both backend development and AI integration while collaborating within a multidisciplinary team.

Workout Planner — *Website made using Javascript/HTML/CSS*

GitHub: <https://github.com/MoistenedEgg/Workout-Planner>

- Designed and developed a responsive web application for planning and tracking weekly workouts.
- Created an intuitive user interface with interactive features and persistent workout management.

Terminus — *Game in Unity (C#)*

GitHub: <https://github.com/MoistenedEgg/Terminus>

- Collaborated within a team to develop a game using object-oriented programming principles.
- Implemented gameplay systems while maintaining a scalable software architecture.
- Debugged and refined application behaviour within a shared codebase.
- Applied software design principles to produce maintainable and reusable code.
